adidas researches, designs, and develops new materials, technologies, and products that adapt more efficiently and personally to each type of player and playing style. adidas innovation aims to enhance power, handling, performance, and efficiency so that every player can give 100% on the court.

MATERIALS Y TECHNOLOGIES

POWER COMFORT HANDLING

We thoroughly innovate in shapes, weights, materials, and technologies so that each adidas racket is a perfect tool, adapted to every playing style. The profile and performance of each are defined by three fundamental variables: power, comfort, and handling.

PERFORMANCE

POWER

The racket's ability to maintain the energy provided by the player in a high-speed or high-intensity shot. A high-power racket is suitable for a player with a high technical level seeking to maximize their energy in each shot.

COMFORT

The racket's ability to release the ball in a low-intensity/speed shot or without the player's energy. A racket with a high comfort index is ideal for a player who, regardless of their level or playing style, seeks a pleasant sensation.

HANDLING

The racket's ability to be easily moved by the player during the game. Rackets with a high handling index require less physical effort. They are suitable for players who want to gain speed and agility in their movements.

SHAPE

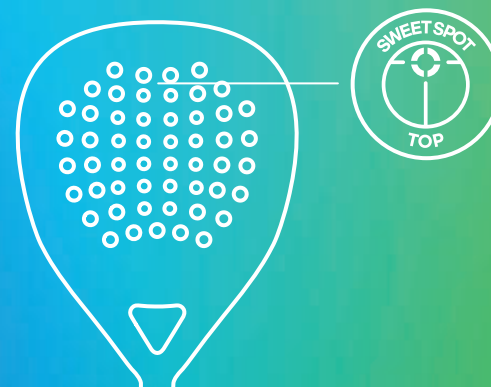

Function dictates form, and this, in turn, directly impacts performance: attack, defense, power, handling, comfort... At adidas, we create rackets with different geometries so that each player finds the perfect shape for their playing style.

SHAPES

DIAMOND

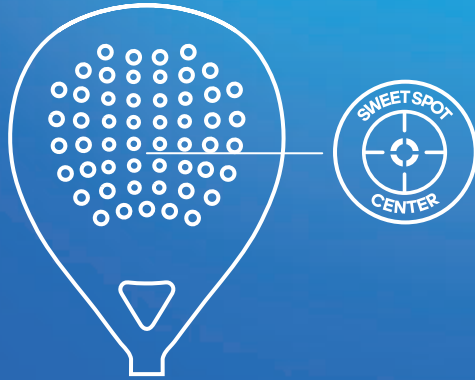

High-balance shape that benefits offensive shots. The new Metalbone range now incorporates a new Diamond shape. With more weight located at the top of the racket, inertia increases and provides amplified power in attacking shots.

DIAMOND OVERSIZE

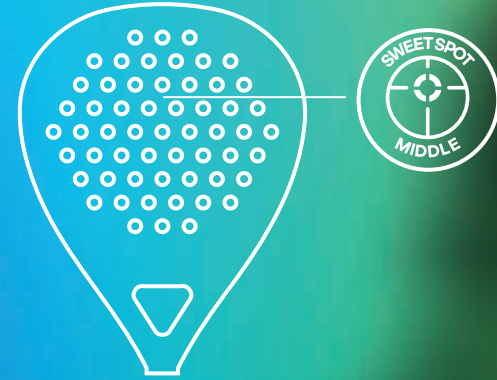

This shape combines high balance with a larger hitting surface. The inertia created by the greater weight at the top provides more power in offensive shots. The larger hitting surface makes these rackets less demanding and more suitable for a greater number of players.

SHAPES

ROUND

The round shape places more weight near the heart, providing the player with greater control in defensive shots, which require more agility in their movements.

ALLROUND

Hybrid shape, between Diamond and Round, that optimizes the racket's behavior in both attacking and defensive shots. For those players who have not yet defined their style and need good performance in all shots.

FIBERS

This collection incorporates six types of fiber, with different levels of flexibility.

This variation, combined with other components—rubber, shape, and technologies—modulates the power and comfort of our rackets.

Less fiber flexibility increases power in fast shots. On the other hand, greater flexibility optimizes rebound and comfort in slow shots.

FIBERS

FIBERGLASS

Soft feel, greater comfort, and excellent ball release.

Its main characteristic is its elasticity. In slow or baseline shots, it provides more ball release than carbon fiber, as it allows greater flexion and offers a greater spring effect. It also allows for softer feels for players seeking more comfort.

FIBERGLASS

CARBON

Power and rigidity, along with exceptional resistance.

It provides more power in fast shots like smashes and offers greater control since, being more rigid, the material does not absorb the force we apply and eliminates the spring effect. Being less flexible, the ball release in slow shots is lower.

CARBON 6K ASC

CARBON ALUMINIZED

Elevated rigidity and maximum durability.

The result of incorporating aluminum into carbon fiber is a harder feel, ideal for power hitters who prefer this solidity to harness all the strength of their arm.

CARBON ALUMINIZED 24K

CARBON ALUMINIZED 16K

CARBON ALUMINIZED 15K

FLEXIBILITY

RUBBERS

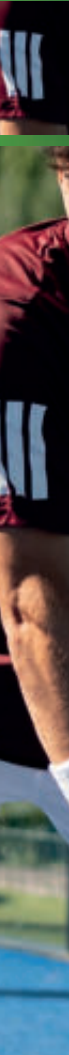

RUBBERS

Rubber is an essential part of the racket's performance. It is mainly defined by its density and memory, that is, by the recovery capacity of this material.

The higher the density, the greater the power; the lower the density, the higher the comfort. In fast shots, greater memory propels the ball with more speed. In slow shots, lower density facilitates more efficient push and greater impulse.

At adidas, we use three types of rubber with different levels of density and memory.

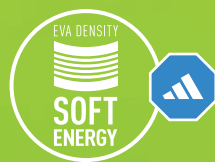

RUBBERS

SOFT PERFORMANCE

Low-density EVA rubber that provides great ball release and comfort in the game. Rackets with this type of rubber are identified by the black cap.

SOFT ENERGY

Medium-density EVA rubber that provides exceptional ball release without losing power. Rackets incorporating this rubber are identified by their blue cap.

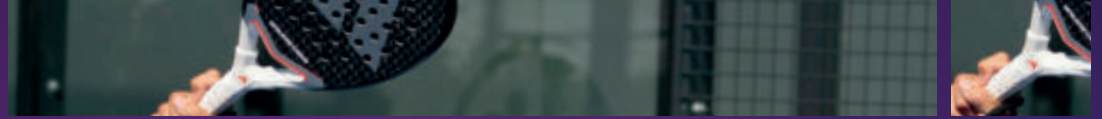

HIGH MEMORY

High-density EVA rubber. Increases power in high-speed shots. Indicated for players with higher technical levels. Rackets with this rubber are identified by the red cap.

DENSITY

POWER

Our power technologies are designed to optimize the player's energy, achieving greater efficiency in each shot.

To maximize power, we prioritize structural rigidity, thus avoiding the loss of energy applied when hitting the ball.

—
POWER

EXTRA POWER GRIP

The longer handle transfers more mass towards the racket's head and shifts the sweet spot upwards. This increases inertia and favors power in shots.

OCTAGONAL STRUCTURE

Exclusive to METALBONE. The carbon tubular structure, with a carefully designed octagonal section, reduces torsion to achieve more precise shots. The eight vertices of the tube provide superior rigidity, ideal for more aggressive players.

LOW POLY

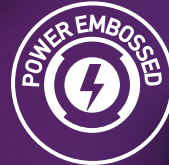

Exclusive to METALBONE. The polyhedral design of the frame and the racket's heart provides greater rigidity and power in shots.

—
POWER

DYNAMIC AIRFLOW

Exclusive to CROSS IT. This technology allows greater airflow in the heart area of the racket during the shot. The open holes in the bridge generate an aerodynamic effect that reduces air resistance and increases the racket's handling.

POWER EMBOSSED RIDGE

External carbon rib located on the frame, which provides greater rigidity to the structure. This technology is incorporated into the most aggressive rackets to achieve greater hitting power.

STRUCTURAL POWER

A fiber insertion in the racket's heart provides greater structural rigidity and increases power.

—
POWER

POWER GROOVE

A beam inserted into the racket's profile increases structural rigidity in the head area and enhances power in more aggressive shots.

NEW

MUSCLE POWER SYSTEM

Exclusive to Arrow Hit

An evolution of the Dual Exoskeleton technology, Muscle Power System is a structure of carbon ribs that cross the racket's heart to increase resistance to torsion.

SPIN SHOTS

Spin shots are distinguished by the rotation imparted to the ball. This rotational effect, whether sliced or topspin, modifies the ball's trajectory and bounce, making it harder for the opponent to respond.

Our spin technologies, based on the racket's roughness, facilitate greater rotation in each shot.

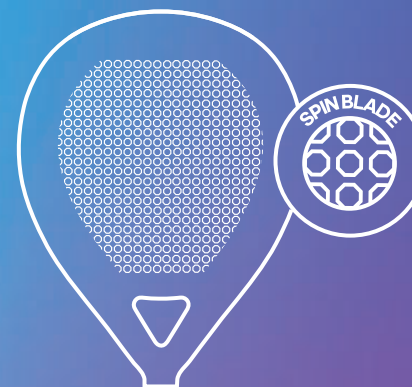

SPIN SHOTS

SPIN BLADE MOLD

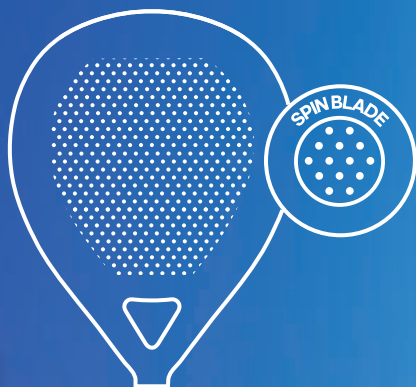

3D relief integrated into the racket's mold, providing a better contact sensation and contributing to achieving a greater amount of spin in shots.

SPIN BLADE DECAL

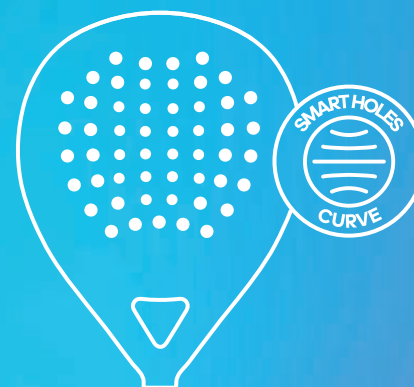

This relief helps improve the feeling of control and increase the amount of spin we can impart to the ball.

SPIN SHOTS

SPIN BLADE GRITT

Sand-textured relief that helps achieve better ball grip and provides a great sense of control.

SMART HOLES CURVE

This hole arrangement is specially designed to favor spin generation in all types of shots.

DURABILITY

Higher power shots generate significant torsional forces in the racket, testing its resistance. Our durability technologies strengthen the racket's critical areas, those that endure the most torsion during play.

DURABILITY

STRUCTURAL REINFORCEMENT

Perimeter reinforcements that allow for greater resistance to the high torsions the racket must withstand during play.

SMART HOLES LINEAL

The arrangement of the holes, equidistant in groups of three, reinforces the hitting surface and improves the racket's durability.

11 THIRTEEN

Innovative hole distribution pattern on the racket. The holes located in the center of the hitting surface have a smaller diameter (11 millimeters). This design provides greater rigidity, power, and durability.

CUSTOMIZATION

Every match is different. Sometimes we need to apply power; other times, we prioritize comfort. At adidas, we have developed two exclusive technologies: WEIGHT & BALANCE SYSTEM and the new INTELLIGENT BALANCE SYSTEM (IBS). Both allow you to customize and adapt your racket to the playing style you require at any given moment.

NEW

INTELLIGENT BALANCE SYSTEM

EXCLUSIVE TO ARROW HIT

The new INTELLIGENT BALANCE SYSTEM (IBS) technology is based on a system of two rails located on the sides of the racket.

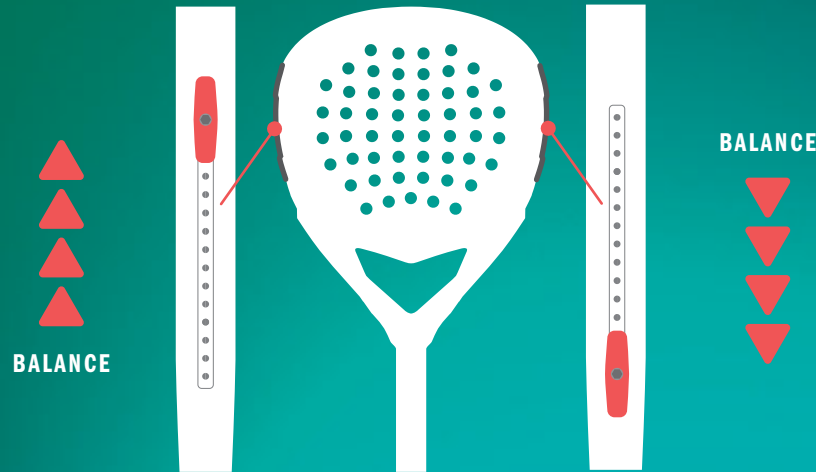

Each rail allows a 9g weight to be moved along the racket, continuously and without predefined positions, to modify the balance to the player's liking. Once the ideal balance is found, the weights are fixed with an Allen key so they do not move during play.

HOW THE INTELLIGENT BALANCE SYSTEM WORKS

By sliding the weight towards the racket's head, the balance concentrates at the top, enhancing attacking shots.

Removing all the weights results in a lighter racket.

By sliding the weight towards a position closer to the heart, we lower the balance, increasing control.

WEIGHT & BALANCE SYSTEM

EXCLUSIVE TO METALBONE

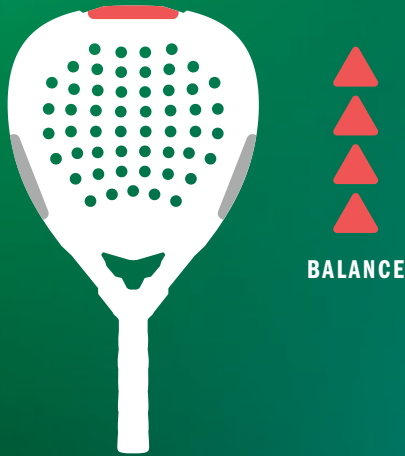

This technology to modify the racket's weight and balance is based on different weights located on the sides and top.

The system includes two plates (1.8 g each), on each plate, two washers (0.6 g each) and two screws (1.3 g each) can be mounted.

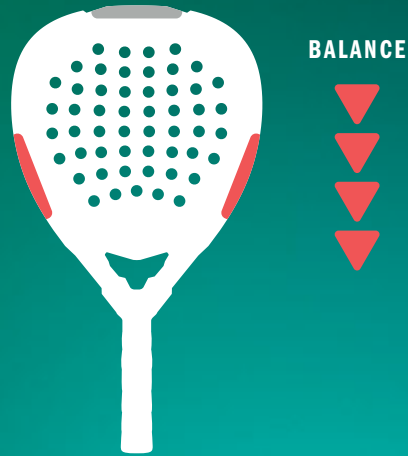

This allows the racket's weight to be modified by a total of 11.2 g.

HOW THE WEIGHT & BALANCE SYSTEM

By placing the weights at the top of the racket, the balance shifts upward, enhancing power shots

Positioning the weights closer to the heart lowers the balance point, enhancing control.

Removing all the weights results in a lighter racket.

Each racket includes an Allen keychain tool for easy installation and removal of the weights.

METALBONE 2026

FEATURES

DIAMOND FORMAT | HIGH SWEET SPOT | POWER IN ATTACK SHOTS | AGGRESSIVE PLAYING STYLE | PRO LEVEL

HIGHLIGHTS

OCTAGONAL STRUCTURE

The octagonal-section carbon tubular frame reduces twisting for more accurate shots.

POWER GROOVE

Reinforcing rib inserted in the frame to increase rigidity and power.

EXTRA POWER GRIP

The longer handle increases inertia and power in every shot.

WEIGHT & BALANCE SYSTEM METALBONE

Customize the weight and balance to your liking. The new and improved removable weight system allows a total racket weight adjustment of up to 11.2 g.

CARBON ALUMINIZED 16K

Increased durability and power.

LOW POLY

The polyhedral design of the frame and racket's heart increases rigidity and power.

CROSS IT LIGHT

FEATURES

ROUND FORMAT | CENTERED SWEET SPOT | POWER + COMFORT | PRO LEVEL

HIGHLIGHTS

LIGHTWEIGHT
Reduced weight (345-360 g)
improves handling and comfort.

EXTRA POWER GRIP
The longer handle increases inertia
and power in every shot.

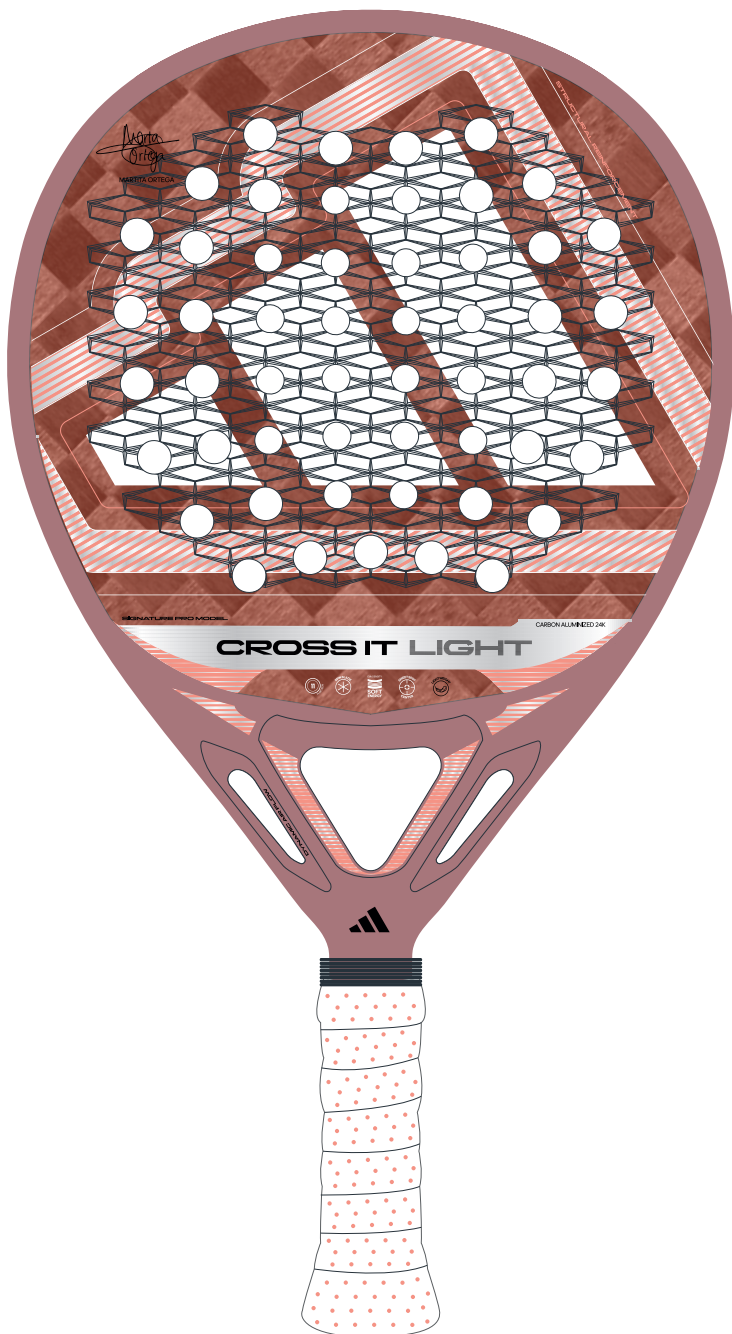

CARBON ALUMINIZED 24K
A highly rigid and durable surface that offers
great power with a soft touch.

SPIN BLADE MOLD
A 3D texture integrated into the racket mold
that enhances ball rotation and spin effect.

11 THIRTEEN
The holes in the center of the hitting surface
have a smaller diameter (11 mm). This design
increases rigidity, power, and durability.

DYNAMIC AIR FLOW
Open holes in the heart of the
racket reduce air resistance
for improved handling.
