

ADIDAS PICKLEBALL COLLECTION 2025

A group of four people are on a blue and red pickleball court. In the center, a man in a purple Adidas t-shirt holds a black and red Adidas pickleball paddle. To his left, a man in a white t-shirt and dark vest looks at the paddle. To his right, a man in a teal patterned polo shirt and a white cap looks on. In the foreground, the back of a woman's head with a ponytail is visible. The scene is lit with dramatic, low-key lighting, creating a professional and focused atmosphere.

A PADDLE FOR EACH PLAYER

For over 90 years, adidas has been the go-to brand for elite athletes across various sports. Now, we're bringing that same level of innovation and performance to pickleball. Whether you're a seasoned pro or just starting out, our paddles are designed to help you elevate your game. Experience the adidas difference today!

FORMAT

The paddle format refers to its construction, shape, and thickness, influencing its performance, from power to maneuverability.

MATERIALS

The main materials that make up the paddle, including the surface and core, determine its performance. At adidas, we offer surface options in carbon fiber and fiberglass, two core types that influence control and power.

PERFORMANCE

TECHNOLOGIES

Our technologies are designed to enhance paddle performance in various aspects, from creating rough textures for spin to incorporating structural reinforcements that increase rigidity, gameplay power, and the ability to adjust weights and balances according to your preferences.

The construction of a pickleball paddle significantly impacts its performance. There are two primary methods: single mold and assembled layers.

CONSTRUCTION

Single mold paddles offer a seamless, integrated structure, while assembled layers allow for greater customization.

CLASSIC MULTILAYERS

Layered construction that incorporates multiple layers of carbon and rough textures into the honeycomb polymer core, along with the edgeguard and handle.

MONOCOQUE

Single-piece construction that includes a carbon frame, covered by carbon fiber, rough texture and a central core.

The shape influences the size of the paddle's sweet spot and maneuverability.

SHAPE

Choose the shape that best suits your playing style.

ATTK

Elongated paddles offer increased reach and power, making them ideal for players who prioritize aggressive play and powerful shots.

CTRL

If you value control and forgiveness over maximum reach and power, a wide-shaped paddle is the ideal choice.

ALL ROUND

The hybrid shape strikes a perfect balance between elongated and standard paddles, providing a versatile option for players seeking a combination of reach, power, and forgiveness.

The thickness of the paddle's core plays a crucial role in its performance. In general, a thicker core provides greater flexibility and control, ideal for players who prioritize precision.

THICKNESS

On the other hand, a thinner core feels stiffer and can increase power.

14MM

Thinner core paddles, typically measuring 14mm or less, offer a unique combination of speed, power, and responsive feel. These lightweight paddles are faster to swing, making them ideal for aggressive players who prioritize attacking and countering. The reduced flexibility of thinner cores results in more power, as the ball doesn't penetrate the core as deeply, allowing for a more direct transfer of energy. While thinner cores may sacrifice some control, their responsive feedback and crisp feel make them a popular choice for players seeking an aggressive and powerful playing style.

14.5MM

This intermediate thickness provides a balance between the speed and power of thinner cores and the control and forgiveness of thicker cores. Players who choose a 14.5mm paddle often enjoy its ability to generate power while still maintaining precision and touch. This makes it a great option for players who want to attack the ball aggressively but also need the control to defend effectively.

16MM

Thicker core paddles, measuring 16mm or more, offer a distinct balance of control and forgiveness. These paddles are generally heavier than their thinner counterparts, providing a more stable feel and increased control. They are particularly well-suited for players who prioritize dinking, resetting, and defensive playstyles. The thicker core absorbs the ball's impact more effectively, allowing for a greater margin of error and making it easier to finesse shots from various areas of the court. While thicker cores may sacrifice some raw power compared to thinner cores, they offer a comfortable feel, making them ideal for players seeking precision and control.

The paddle's surface is a key factor in determining its performance. At adidas, we offer two high-quality options:

SURFACE

CARBON FIBER

Known for its strength, stiffness, and power, carbon fiber surfaces provide a responsive feel and exceptional durability.

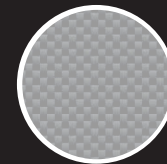

FIBERGLASS

Offering a balance of power and control, fiberglass surfaces are often preferred by players who prioritize a softer touch and increased forgiveness.

RAW CARBON

Our paddles are crafted from premium carbon fiber, a material renowned for its strength and durability. The advanced weave structure allows for a lightweight construction, giving you the power to dominate the court without sacrificing maneuverability.

FIBER GLASS

Our fiberglass paddles offer a comfortable and forgiving feel. The enhanced flexibility of fiberglass provides excellent ball control and touch, allowing you to finesse your shots and develop your skills. Experience the perfect blend of comfort and performance with our fiberglass paddles.

The paddle's core is fundamental to its performance.

CORE

We offer two core types with different densities, distinguished by red and black grip caps, to suit various playing style.

PP HONEYCOMB LD

Low-density honeycomb polymer core, resulting in a comfortable paddle that generates sufficient power and a touch with great control. Lightweight and highly resistant material. Recognized by the black cap.

EVA

High-density EVA core delivers exceptional power and a responsive feel. This advanced material offers optimal stiffness and durability, making it ideal for aggressive players who demand the best.

Our paddles feature innovative surface textures designed to enhance spin generation and give you complete control over the ball.

ROUGHNESS

Disrupt your opponents and dominate the court with our paddles' superior spin-generating capabilities

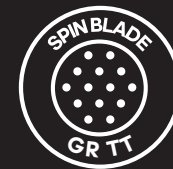

SPIN BLADE MAX

Our paddles feature a cutting-edge, rough texture designed to maximize spin generation. Feel the difference as you effortlessly control the ball and execute impressive shots that leave your opponents guessing.

SPIN BLADE +

Experience the power of spin with our paddles featuring a rough, textured surface. Gain precise control and surprise your opponents with your ability to manipulate the ball.

SPIN BLADE GRITT

Dominate the court with our paddles featuring a rough, textured surface designed to maximize spin. Enjoy the versatility and control that comes with the ability to manipulate the ball with precision.

Our paddles feature a range of lengths and comfortable padded grips.

GRIP

The ergonomic design and soft, shock-absorbing materials provide a secure grip, ensuring optimal comfort and maneuverability on the court.

EXTRA POWER GRIP

If you're a two-handed backhand player looking for a power boost, this 5-inch grip is the perfect choice. The mass being shifted towards the tip generates extra momentum for explosive shots.

STANDARD GRIP

The standard 4.75-inch grip offers a secure hold, making it ideal for players who prefer a one-handed backhand.

COMFORT GRIP

With an EVA layer that offers a padded and smooth feel, this grip features a perforated surface for a non-slip and secure grip, combining comfort and control.

REGULAR GRIP

A common grip that provides firmness, a soft touch, and excellent grip, ensuring a solid hold with every shot.

DURABILITY

Our technologies reinforce critical areas of the paddle, extending its lifespan and ensuring long-term high performance.

STRUTURAL REINFORCEMENT

Perimeter carbon reinforcement integrated from the bottom of the handle to the sides of the paddle. This creates torsional rigidity and durability, providing a solid and stable surface.

UPGRADED EDGE GUARD

Perimeter protector that shields your paddle from accidental bumps and scrapes, extending its lifespan and ensuring long-lasting performance.

CARBON FRAME

Internal construction with a highly rigid carbon tubular that protects the core of the paddle and contributes to the structural rigidity of the paddle.

NEW

LOW POLY

The polyhedral design between the handle and the surface of the paddle provides greater rigidity and power in the shots.

WEIGHT & BALANCE SYSTEM

Exclusive adidas technology that allows you to modify the weight and balance of the paddle according to your needs, enabling you to find the combination that best fits your playing style.

EVOLVED

WEIGHT AND BALANCE

Customize your game with adjustable weight technology. By adding or removing weight from the top of your paddle, you can fine-tune its balance and feel to suit your individual playing style. Experience enhanced power, control, and comfort as you tailor your paddle to match your unique needs and preferences.

WEIGHT AND BALANCE

Allows for the distribution of 4 screws of 2.6 grams each, totaling 10.4 grams, in the 6 available holes located in the sides of the paddle. There are numerous combinations to find the one that best suits your game. Removing the weights will bring the paddle's balance closer to the handle, providing greater control and maneuverability. Removing the weights will shift the balance to the top of the paddle, aiding in power shots.
